

TIRE ANTI-SKID STICK

*Give Your Operators an Effective Visual
Tool That Only They Can See!!*

One Tire Anti-Skid Stick attaches to each wheel of your trailer supplying your operators with a clear visual indicator to help them recognize a frozen brake. When moving the trailer forward & the Tire Anti-Skid Sticks aren't turning while looking in your mirrors...neither are your tires. This very effective tool works day and night. Virtually invisible to the public eye and conveniently at approximately 30 km/h when product is not required centrifugal force causes it to fold against the wheel out of view by the operator and the public.

- **Improve efficiency and reduce costs & liabilities** – lower or even eliminate late loads due to skidded tires. Less down time means more delivery time. Reduce tire blow-outs while increasing public safety.
- **Easily Installs** - rust inhibitor coated attachment clip. Two simple taps with a small hammer attaches the product to the wheel. The same as weights are installed when balancing tires. At only ½ an ounce it will not affect balance. No added expense during tire repairs to handle this tire anti-skid product.
- **Reduce maintenance costs** – tires are one of the top maintenance costs for most fleets. Being able to reduce or even eliminate skidded tires will significantly lower these costs while making the maintenance department more efficient lowering the cost of ownership of the equipment.
- **Designed for rugged conditions** – produced in Canada using the same polyurethane material found with suspension bushings.
- **Day and night-time visibility** - stands 90 degrees from the tire for a clear day-time view by the operator. Available in custom colors. High density safety colour used making for a clear night-time view by the operator.
